INTRODUCTION

Sun Precast Co., Inc. is a respected and established supplier of quality custom Architectural Precast and Cast Stone Products throughout the eastern United States. Our capability to handle projects of any size and complexity, along with manufacturing custom products that fit each and every time, has given us the reputation as the premier fabricator of Architectural Precast and Cast Stone.

APA Plant Certification requires architectural precast manufacturers to adhere to a strict set of industry quality control guidelines and processes, which must be verified by independent auditors every six months.

The Sealant, Waterproofing and Restoration Institute is an international trade association. Its members are the most experienced and qualified restoration contractors and manufacturers in the industry. Members promote industry wide standards of application and products.

Our company has been a member of the Cast Stone Institute since 1990. Each member must submit to a rigorous examination of product quality, safety, material testing and meticulous record keeping, conducted by an independent engineering firm. Four past presidents of the Cast Stone Institute have been from Sun Precast.

Our firm's experience with Sun Precast was outstanding. From the beginning, they provided excellent communication and comprehensive shop drawings. The production of materials was on-time and the requested finishes were a perfect match. We look forward to another job with the team at "Sun."

- Principal Architect

PRODUCTS

Our comprehensive mold manufacturing resources enable us to produce anything from simple coping to complex shapes requiring unique artistic talents.

COMPREHENSIVE SERVICES

We are committed to providing customers with the best experience possible from start to finish. When dealing with Sun Precast you can expect timely communication, strict attention to detail, unsurpassed product quality and on-time product shipments.

The majority of our employees have been with Sun Precast for over 15 years, forming an unparalleled base of knowledge and expertise, which adds significant value to our customers.

The in-house Drafting department is able to download plans for estimating takeoffs and utilizes computer-aided technology to produce detailed pre-production shop drawings. Engineering services are also available.

Sun Precast employs a Certified Concrete Testing Technician to test the mixes for compressive strength and permeability. Daily tests are performed on all raw materials to ensure that each production batch meets quality standards.

Carpenters fabricate custom molds for each project. The forms are built to maintain specified tolerances and prior to the first pour, every form is compared for accuracy against the approved shop drawings.

"Sun Precast Company has the highest quality product in the industry. Our craftsmen prefer to use Sun Precast due to the coordination and ease of installation."

- Vice President Construction

If required by the project specifications, steel reinforcement is cut and bent to fit in our facility. Steel may be black, epoxy coated, hot dipped galvanized or stainless.

Prior to production we provide samples for approval of color, finish and texture. This ensures the application of the correct mix design to produce units that exactly match the customer's specifications.

Concrete is poured, consolidated and then properly cured to maximize strength and durability. After curing, the mold is stripped and the pieces are then moved to the finishing facility.

Finished can be customized to fit virtually any design criteria from standard acid wash, exposed aggregate, form finish, form textured, heavy acid wash or even polished. Every unit produced is compared to the approved control sample to ensure proper color and finish.

When complete, the product is palletized and prepared for shipment. Larger pieces can be shipped on an A-Frame or assembled in single-set arrangement on a flatbed trailer.

Sun Precast will coordinate shipments to meet the customer's project schedule.

RESIDENTIAL

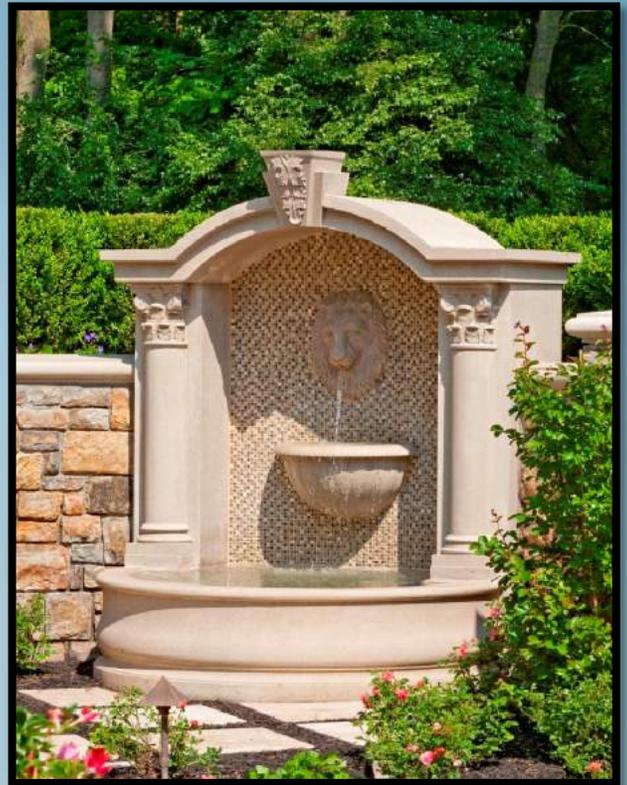

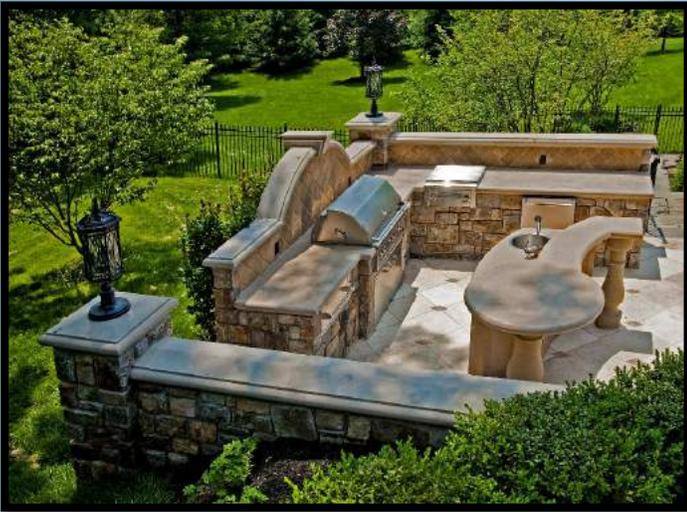

Sun Precast is the premier manufacturer of custom Cast Stone serving the luxury residential market.

We are accustomed to working closely with the architect and owner in bringing to life the owner's vision to create a unique and distinctive property.

Every mold is sculpted and handcrafted by our experienced in-house artisans, offering you unparalleled freedom of design.

"Our firm chooses to work with Sun Precast because of their ability to expertly replicate our customized architectural masonry designs ; on-time, every time!"

- Andrea D'Alessio
D'Alessio Inspired Architectural Designs

RESTORATION SPECIALISTS

Sun Precast has been meeting the needs of restoration firms since 1978. We recognize the challenges that restoration projects present, and understand the importance of project timelines, uncompromised quality and open communication throughout the project. Our skilled craftsmen are capable of fabricating any custom mold, restoring historical detail to masonry elements and matching any color or texture that a project requires. A very important element of any restoration project is the ability to react to unforeseen circumstances. We are accustomed to working closely with the design professionals and masonry contractors to assure timely solutions to the unique challenges of each restoration project. Our industry expertise allows you to focus on what matters most to you, which is the management and successful execution of the project.

Princeton University Press, Princeton NJ - Cast Stone restoration of the original 99-year-old entry structure. Original details were enhanced with sculptured clay before molding to restore the original architectural details.

Advanced molding techniques and fine craftsmanship enable replication of intricate architectural details while maintaining historical integrity.

"Sun's experienced staff reviewed our project requirements and found a way to simplify a complex restoration. Their attention to detail saved the project valuable production and installation time. The project was delivered on time and the end results exceeded the expectations of the owner, architect and community."
